Scientific References for Cyto-Ess™

Cyto-Ess™ is a nano-molecular refined lacteal complex containing a vast array of naturally occurring molecules with a molecular weight of less than 100,000 Dalton. The presence and viability of specific molecules has been confirmed by application of measurement and assay technologies in the laboratory of Tufts University in Boston, MA and at Tiburon Labs in Tucson, AZ. Expression of certain molecules in Cyto-Ess™ has been expanded by the application of patented and proprietary processes.

Each of the molecules has a unique purpose in supporting immune function and the following references have been arranged by molecule. This document does not include all the molecules present in Cyto-Ess™. Many have not yet been sequenced and studied.
